

## 150BL –INSULATED STANDARD BLANKET WARM ENVIRONMENT TESTING REPORT

### Results:

- The average temperature was 48% lower utilizing the 150BL Insulated Standard Blanket.
- The average difference in temperature was 43°F colder utilizing the 150BL Insulated Standard Blanket.
- The temperature utilizing the 150BL Insulated Standard Blanket decreased 11°F while temperatures increased when not using the blanket.

### Scope:

We tested the difference in temperature environments by simulating the transportation of frozen product. We measured the temperature of the storage environment utilizing a 150BL Insulated Standard Blanket and the temperature of the environment without utilizing the 150BL Insulated Standard Blanket. Using temperature-monitoring probes we charted the temperature every 30 minutes for 3 hours and discovered that performance was 48% better utilizing the 150BL Insulated Standard Blanket.
